Abstract:

The investigation of an irrigation district requires consideration of several major factors. These may be classified under the three general headings, legal, engineering and economic. It is the purpose of this thesis to give general statements covering these points, show how the Harlem Irrigation District was considered by the Irrigation District Bond Com-mission and present some additional data relating to this district.

FACTORS AFFECTING IRRIGATION DISTRICTS One of the reasons for the organization of most irrigation districts is to provide means to raise funds to pay for construction or purchase of works. This is usually accomplished ty the issuance and sale of bonds. An Irregularity in any of the legal proceedings relating to the creation of the district or in the steps taken leading up to the issuance of bonds would probably cause the bonds to be considered invalid. Consequently it is of utmost importance to a prospective bond purchaser, and therefore to a district, to make sure that all legal proceedings are or have been properly conducted.
